

WAN CHI WAI

DATA SCIENTIST

CONTACT

☎ +852 95146811

✉ chiwaiwan21@gmail.com

SKILLS

Python, PyTorch, SQL

LLM Agents, Reinforcement

Learning, Deep Learning

Vue.js, TypeScript, Web Crawling

EDUCATION

Bachelor of Science in Data and System Engineering

City University of Hong Kong
2021-2025

Master of Science in Artificial Intelligence

Chinese University of Hong Kong
2025-2027

LANGUAGES

Fluent in English, Putonghua and Cantonese

PROFILE SUMMARY

Graduated student in City University of Hong Kong with a degree in Data and System Engineering and pursuing a master degree in data science. Experienced in Machine Learning, NLP, Reinforcement Learning, Image Classification, Deep Learning. Looking for positions that are related to Machine Learning and AI development.

WORK EXPERIENCE

Internship

2024 Jul - 2024 Aug

Department of Information and Technology - Hongrita Plastics Ltd.
Zhongshan

- Daily operation on company's SAP system. Develop workflow on OA system and Retrieve data from SQL database

Software engineer

2025 Sep - Present

Visutech Asia Limited

- Develop IoT + Machine Learning solution for clients

HANDS-ON PROJECT

World Model RL Race Track Simulation

- Implemented DreamerV3 world-model reinforcement learning in PyTorch on the racecar_gym PyBullet simulator (SingleAgentAustria-v0 F1Tenth-style track). Adapted r2dreamer with a custom environment interface, trained agents via RSSM imagined rollouts, and benchmarked against a PPO residual-learning baseline. Achieved ~20× score improvement (5 → 90+) over 180k steps with stable lap navigation using LiDAR perception.

OpenClaw Agent Automation

- Built autonomous browser agents on OpenClaw with DeepSeek API: JobsDB job search, constraint filtering, and tailored in-platform applications; plus Outlook Web scholarship-mail search and local archival with deduplication manifests. Includes reusable runner scripts and candidate-profile-driven prompt workflows.

AI-powered automatic food ordering website

- Using Vue.js and TypeScript, integrating Claude 3 Sonnet and DeepSeek-R1 LLMs for conversational interfaces. Achieved 100% accuracy (Claude) in structured tasks via Amazon Science dataset evaluation, optimized multi-turn dialogue handling, and identified model limitations for real-world deployment.
-
